Don Alex's
ch. VI - 1984

Machine Division

The Machine Division maintained close contact from the outset with leading designers and manufacturers of information retrieval and micro-photographic equipment. In fact, the ingenuity and expertise of OCD employees and the unique information handling needs of OCD in some instances led to the development of new machinery or new applications of existing equipment especially adapted to its operating needs. The utilization of aperture cards for storage, the Photostat Expediter for rapid reproduction, introduction of the Flexowriter, modification of Recordak cameras, and testing closed circuit television equipment were but some of the projects reviewed and adapted by the Machine Division. The expertise of the personnel of this Division was constantly refreshed by special training which kept them abreast of the rapidly changing technology and prepared them for conversion to the world of computers.

14 Sept 54 Not all experimentation was successful. In 1954, the AD/CD had some doubts whether the Rapid Selector (a machine for the rapid sorting of material on microfilm, developed by Vannevar Bush and others) could be adopted for OCD's special needs. The AD/CD had suggested that the machine not be delivered to OCD until it could carry the workload OCD required of it after testing. If it could not meet the standards he set, OCD should not accept delivery. The machine failed the test. Another item tested was the Videograph Reproduction System, developed by the A.B. Dick Company, of interest to OCR as an improved office reproduction system which would be dry process, faster than the Photostat Expeditors, and equipped to handle both aperture cards ^{hard copy and} (16/AAA/BB/AA) Two years of developmental work and testing (1960-62) led to its rejection by OCR because the end product was of unacceptably poor quality. Another experiment, MINICARD, was terminated in 1960 when it was concluded that it would not provide substantially improved service to compensate for costly and cumbersome processing procedures.
